Work Experience

Vannevar • Software Engineer *2025 – Present*

- Built agentic AI products end to end, from the agent harness and prompts to the backend and interface, shipping per-agent tool selection, stop/rejoin for running chats, and chat sharing
- Led Dashboards from RFC to usable product in about six weeks: wrote the spec, sequenced the team's work, and built on existing data API content types so sharing and permissions came built in
- Designed and shipped the user-facing side of a citations overhaul that replaced model-generated citations with deterministic ones (200%+ more citations): hover cards, a Sources panel, and ICD-206 compliant exports
- Unblocked government users a week before a key deadline by tracing a download failure to an egress proxy, then working with their IT on an allowlist that now covers users nationwide
- Built the first automated end-to-end coverage of the agent backend, with Playwright suites and hourly smoke tests
- Owned about 1 in 6 production deploys over six months and led deploy validation

Atlassian • Full-Stack Software Engineer 2 *2024 – 2025*

- Raised feature adoption 90.7% and cut legacy system usage 31.3% by shipping 10+ Objective Creation features behind a progressive Statsig rollout, affecting $8M+ ARR from enterprise customers
- Took Sentry error alerts from 192 to 0 by adding error handling, validation, and monitoring across the React/TypeScript frontend and Node.js backend services
- Shipped Dependency Tags, the most requested feature, and delivered Release Vehicle enhancements 13 days early across the schema, REST API, and React UI

Atlassian • Full-Stack Software Engineer 1 *2022 – 2024*

- Delivered the Grid Column Configurations API for 12+ enterprise customers ($8M+ ARR), with repository and service layers covered by SpecFlow integration tests
- Served as release manager for 15+ releases, mentored 2 engineers, and led a "Joy of React" course for 7+ engineers

Chewy • Software Engineer *2022*

- Built the dynamic pricing backend features behind a 20% revenue increase across 4,000 SKUs
- Raised bundle sales 90% by standardizing product bundles as a component library across product pages

Pacific Northwest National Lab • Software Engineer *2017 – 2021*

- Built full-stack React and C# ASP.NET applications used by 100+ analysts for real-time cybersecurity analysis
- Sped up data analysis workflows 30% with algorithmic improvements and visualization tools in D3.js and Java
- Co-authored a peer-reviewed paper on modeling adversarial activity, presented at a DARPA conference

Education

Western Washington University *Bellingham, WA*

Bachelor of Science in *Computer Science*

Skills

AI	Agent harnesses, LangGraph, LangChain, tool calling, prompt design, end-to-end agent testing
Languages	TypeScript, JavaScript, Python, Go, C#, Java, Kotlin, Scala
Frontend	React, Next.js, Remix, Svelte, Astro, TanStack Query, Tailwind, Playwright, Jest
Backend	Node.js, GraphQL, REST APIs, PostgreSQL, SQL Server, MongoDB, Redis
Platform	AWS, Docker, CI/CD, Statsig, Sentry, Octopus
